

GSoC and OSM

Tobias Knerr
2020-01-27

*Spend your summer break writing code for an
open source software project!*

Matrix.org

An open network for secure, decentralised communication

Mozilla

The internet for people, not for profit.

MuseScore

MuseScore is music notation software used by millions of musicians worldwide

OpenStreetMap

Creating and distributing free geographic data for the world.

OSGeo

The Open Source Geospatial Foundation

PostgreSQL

The World's Most Advanced Open Source Database

Python Software Foundation

Python is a programming language used by software developers and scientists.

R project for statistical computing

R is a free software environment for statistical computing and graphics

ScummVM

ScummVM is a GSoC umbrella for game preservation projects

Swift

Swift is a high-performance application and system programming language.

The Apache Software Foundation

Providing open source software to the public free of charge

The Eclipse Foundation

The Platform for Open Innovation and Collaboration

How to GSoC

1. Pick among 200+ open source projects
2. Spend three months coding (from home)
3. Get experience, good karma, and money

History and numbers

- First GSoC in 2005:
 - 200 student positions were planned
 - received 8740 project applications
- GSoC 2019: 1276 students accepted

73%	Computer Science
17%	Engineering
4.2%	Mathematics

Students by country

1. India (605)
2. United States (104)
3. Germany (53)
4. China (52)
5. Sri Lanka (41)
6. Russia (35)
7. Canada (31)

Stipend

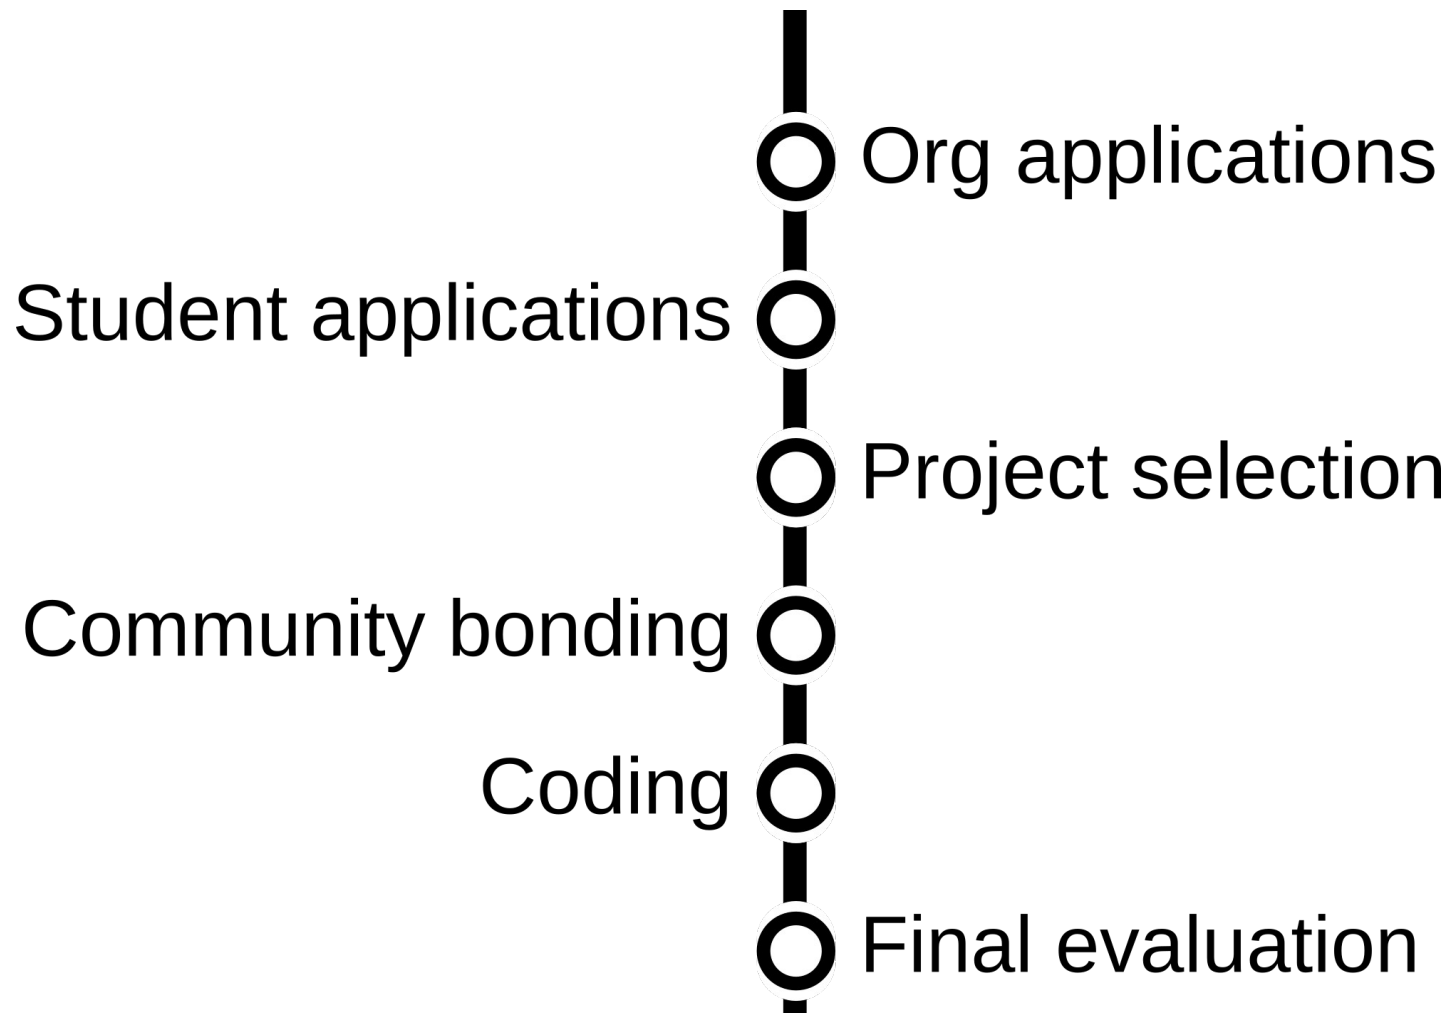

\$3000 to \$6600 based on university location

Estonia	3600
Ethiopia	3000
Fiji	3600
Finland	6000
France	5400
Gabon	3000
Gambia, The	3000
Georgia	3000
Germany	5400
Ghana	3000
Greece	4200
Grenada	4200
Guatemala	3000

Eligibility

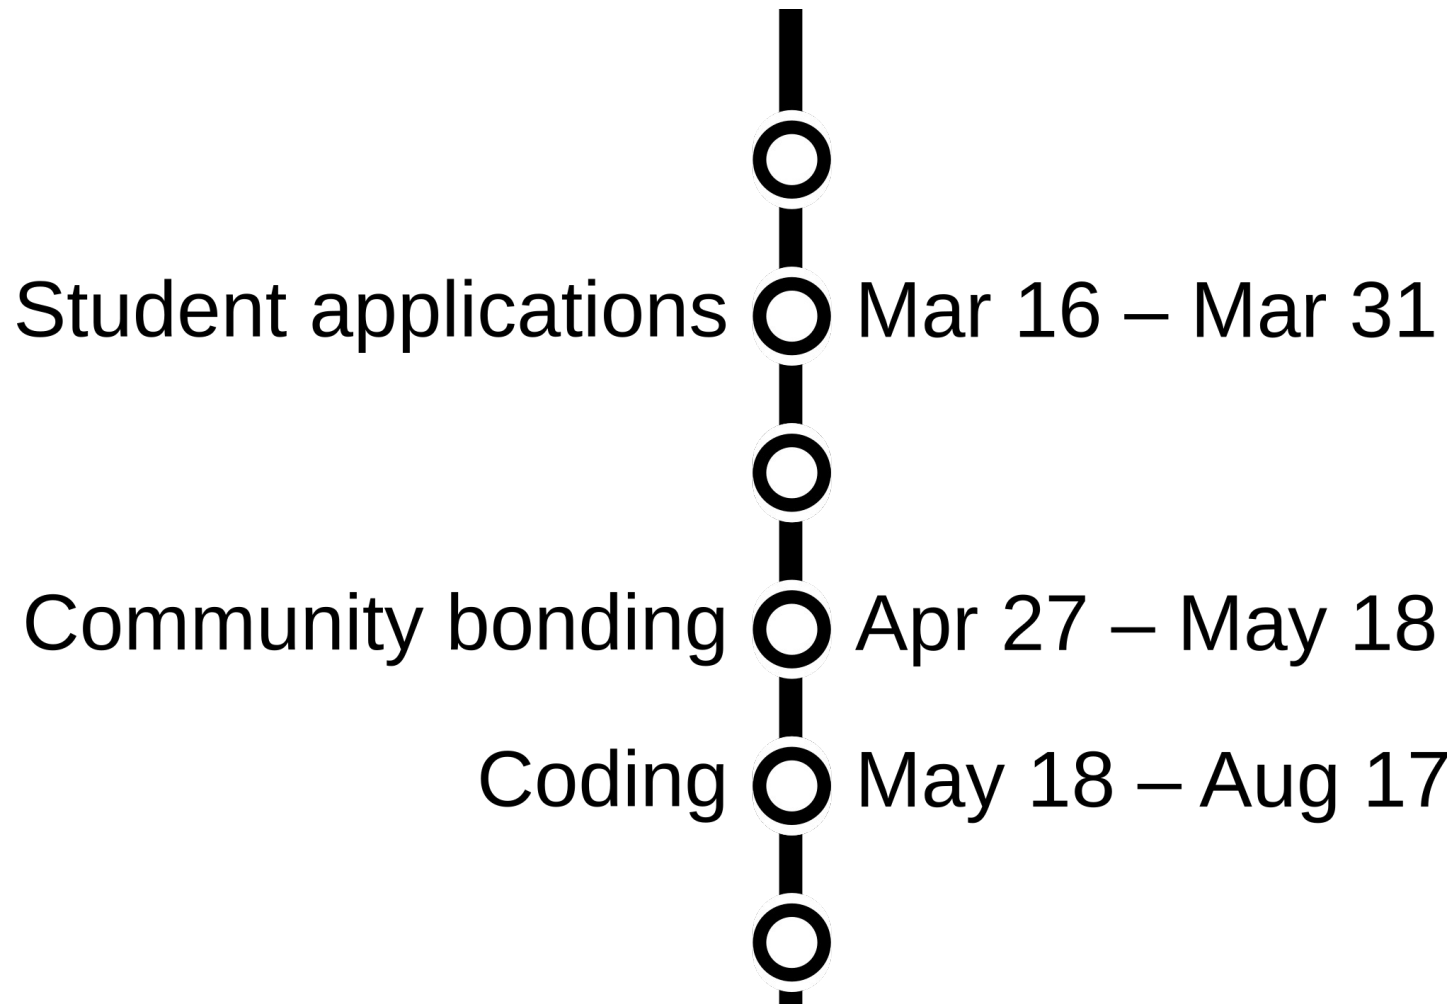

- At least 18 years old
- Full or part-time student
 - enrolled at the beginning of the program
 - PhD students are eligible, too
- Specific rules about being allowed to work in the country you reside in, not being subject to US embargo, ...
 - verify if this may affect you!

Timeline

<https://summerofcode.withgoogle.com/how-it-works/#timeline>

Timeline (2020)

<https://summerofcode.withgoogle.com/how-it-works/#timeline>

What else is there to learn?

- Finding a fun project idea
- Writing an application that gets you selected for GSoC
- Successfully passing evaluations
- Making use of mentoring

... also, real-world project examples from OpenStreetMap

OpenStreetMap is a free, editable map of the whole world that is being built [mostly] by volunteers largely from scratch and released with an open-content license.

How does it work?

Большой Курмыш ул.

connect

Transit

Frequent Transit: all buses have bike racks on the front with room for two bikes. Sometimes they are full, but usually not. Uphill segments of frequent lines are shown here. On average, you should expect to wait about 7 minutes (between 0 and 15 minutes) for these lines daytime on weekdays. Sundays and times after the evening rush hour have less frequent service.

Other Transit

Urbana 15 miles

Xenia to Columbus is mostly farmland with little shade.

Ohio to Erie Trail 11 miles

South Charleston 19 miles

Washington Court House

Sabina

This map is the result of more work than I can recall. Particular thanks for keeping me sane go to my advisor, Dr. Widener and to the UC of Geography for their direct support. Elevation data comes courtesy of the US Geological Survey and all other data is from [OpenStreetMap.org](https://www.openstreetmap.org). My thanks also go especially to Minh Nguyen, Irhill, NE2 and all the other mappers and programmers who volunteer their time to create such an incredibly useful data set.

Chemnitz

Der Titel dieses Artikels ist mehrdeutig. Weitere Bedeutungen sind unter **Chemnitz (Begriffsklärung)** aufgeführt.

Chemnitz ˈkʰɛmnɪts[ⓘ] (von 1953 bis 1990 nach **Karl Marx** als **Karl-Marx-Stadt** benannt) ist eine **kreisfreie Stadt** im Südwesten des **Freistaates Sachsen**. Sie ist die drittgrößte Stadt sowie eines der sechs **Oberzentren** von Sachsen. Die **Großstadt** mit 243.521 Einwohnern (Stand 31. Dezember 2014) liegt am Nordrand des **Erzgebirges** im **Erzgebirgsbecken**. Chemnitz ist Hauptsitz der **Landesdirektion Sachsen** und Teil der **Metropolregion Mitteldeutschland**.

Die älteste urkundliche Erwähnung datiert aus dem Jahre 1143. Im 19. und frühen 20. Jahrhundert entwickelte sich Chemnitz zu einer wichtigen Industriestadt in Deutschland. Die **Einwohnerzahl** überschritt in der Zeit der **Hochindustrialisierung** 1883 die Marke von 100.000 und erreichte zu Beginn der 1930er Jahre mit über 360.000 ihren Höchstwert. Im **Zweiten Weltkrieg** wurde die Chemnitzer Innenstadt bei Luftangriffen im Februar und März 1945 zu 80 % zerstört.^[2] Am 10. Mai 1953 erfolgte durch das Zentralkomitee der SED und die Regierung der DDR die Umbenennung der Stadt in *Karl-Marx-Stadt*.^[3]

OSM in GSoC: Number of students

Timeline

General considerations

- Accepted projects have $> 80\%$ success rate
- Up to 3 proposals (but focus your efforts)
- Read the org's instructions
- Get started *before* applications open

Finding projects

- Look for interesting orgs and projects
- List of orgs on GSoC page:
 - basic info, technologies
 - links to mailing lists, blogs, chat, etc.
 - project ideas
 - application instructions

OpenStreetMap

<https://www.openstreetmap.org/>

Creating and distributing free geographic data for the world.

OpenStreetMap is a crowdsourcing project that creates and distributes free geographic data for the world. Our data is collected by volunteers around the globe largely from scratch and released with an open-content license. We allow free access not only to our map images, but all the underlying map data, which powers websites and apps used by billions of people worldwide.

OSM data can be freely used in both open and closed source software, and has attracted many commercial users. Still, the success of OSM wouldn't be possible without open source software and volunteer developers. The database, website and api running on our own servers, the editing tools used by contributors to improve the map, and many of the most popular libraries and end-user applications within the OSM software ecosystem are all open source software, and developed through a community-driven process.

As our Google Summer of Code participation spans this diverse set of software projects, most of which are maintained as independent efforts under the OSM umbrella, students will encounter a diverse range of programming languages, paradigms and use cases. We hope that we have

Search suggestions for osm.org

Suggested By

[Lonvia](#)

Summary

Providing suggestions while typing in a query in the search box is a standard feature of online maps. OSM's main search engine Nominatim cannot be used for generating such suggestions because it cannot handle partially written words. Full text search engines like elastic search are much better suited for that job. The goal of this project is to set up a database for search suggestions for osm.org. This database must be derivable from the Nominatim database, regularly updatable, be able to handle arbitrary languages and small enough to run alongside the Nominatim installation on nominatim.openstreetmap.org. A possible starting point is the [Photon project](#) which creates an elastic search database from Nominatim and therefore already fulfils part of the requirements.

Skills Required

Java, SQL(Postgresql, Postgis)

Difficulty

Hard

Possible Mentors

lonvia

Notes

Comments

Your own project ideas

- depends on org
- usually possible ...
 - ... as long as it's a feature for existing software
- greenfield projects are very rarely an option
- mentor needed!

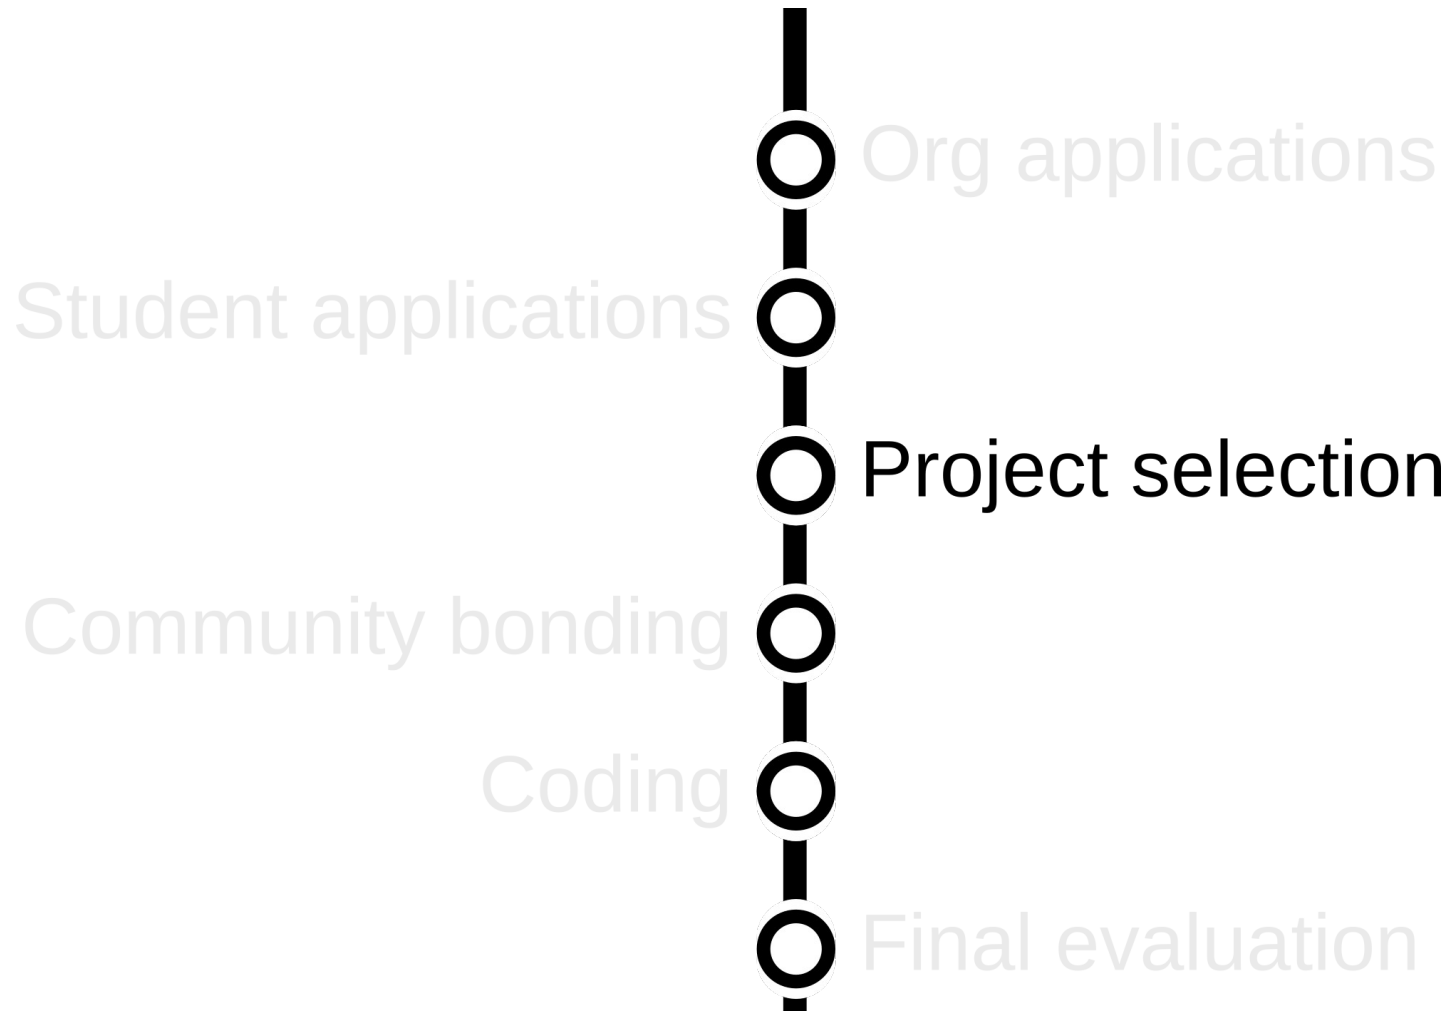

Reaching out

- Contact mentors directly,
or use lists/forums/chat
- Goals:
 - learn more about the project idea
(or bring up your own)
 - know enough about the software and
code base to write a solid proposal
 - leave a good first impression
 - maybe avoid conflicting proposals

Written proposal

- Personal details
- Relevant skills
 - show us previous projects!
- Project proposal (main part)
 - describes what you will implement, with some technical detail
 - includes a timeline for certain milestones
 - “contract” for judging whether you pass or fail
- Separately: eligibility check by Google

Timeline

What are we looking for?

- good programming skills
- knowledge of relevant tools
- existing community connection is a plus
 - fixing some issues
 - OSM-specific: adding map data
- plausible, well-researched proposals

Project selection

- Takes about 1 month
- Admins and mentors review the applications
 - ... not just mentors for that project idea
- Org requests number of slots (min/max)
 - “We’d like to mentor 6–8 students this year”
- Slot assignment by Google
 - “You get 7 slots” (never more than max)”
- Org fills the slots with student projects
 - Deal with students with multiple applications

Internal OSM process

Step 1: Move proposals to ignore list

- Extremely short, low effort
- Off topic
- Clearly not eligible
- Significant omissions from our list of questions

Don't end up here, please!

Internal OSM process

Step 1: Move proposals to ignore list

Step 2: Independently rate proposals

- We use a 0–9 grading
- Not the final assesment, just a rough ranking
- We also make notes to discuss with others

	G	H	I	J	K	L
						average
8	9	8	8	9		8.3
5	7	6	6	7		6.2
1	3	4	3	1		2.5
3	4	6	4	5		5.0
3	3	5	5	7		5.3
4	6	7	4	5		5.2
6	5	6	7	5		5.8
7	7	7	7	5		6.7
0	2	3	1	1		1.3
7	6	6	6	5		6.0
5	5	6	5	5		5.2

Internal OSM process

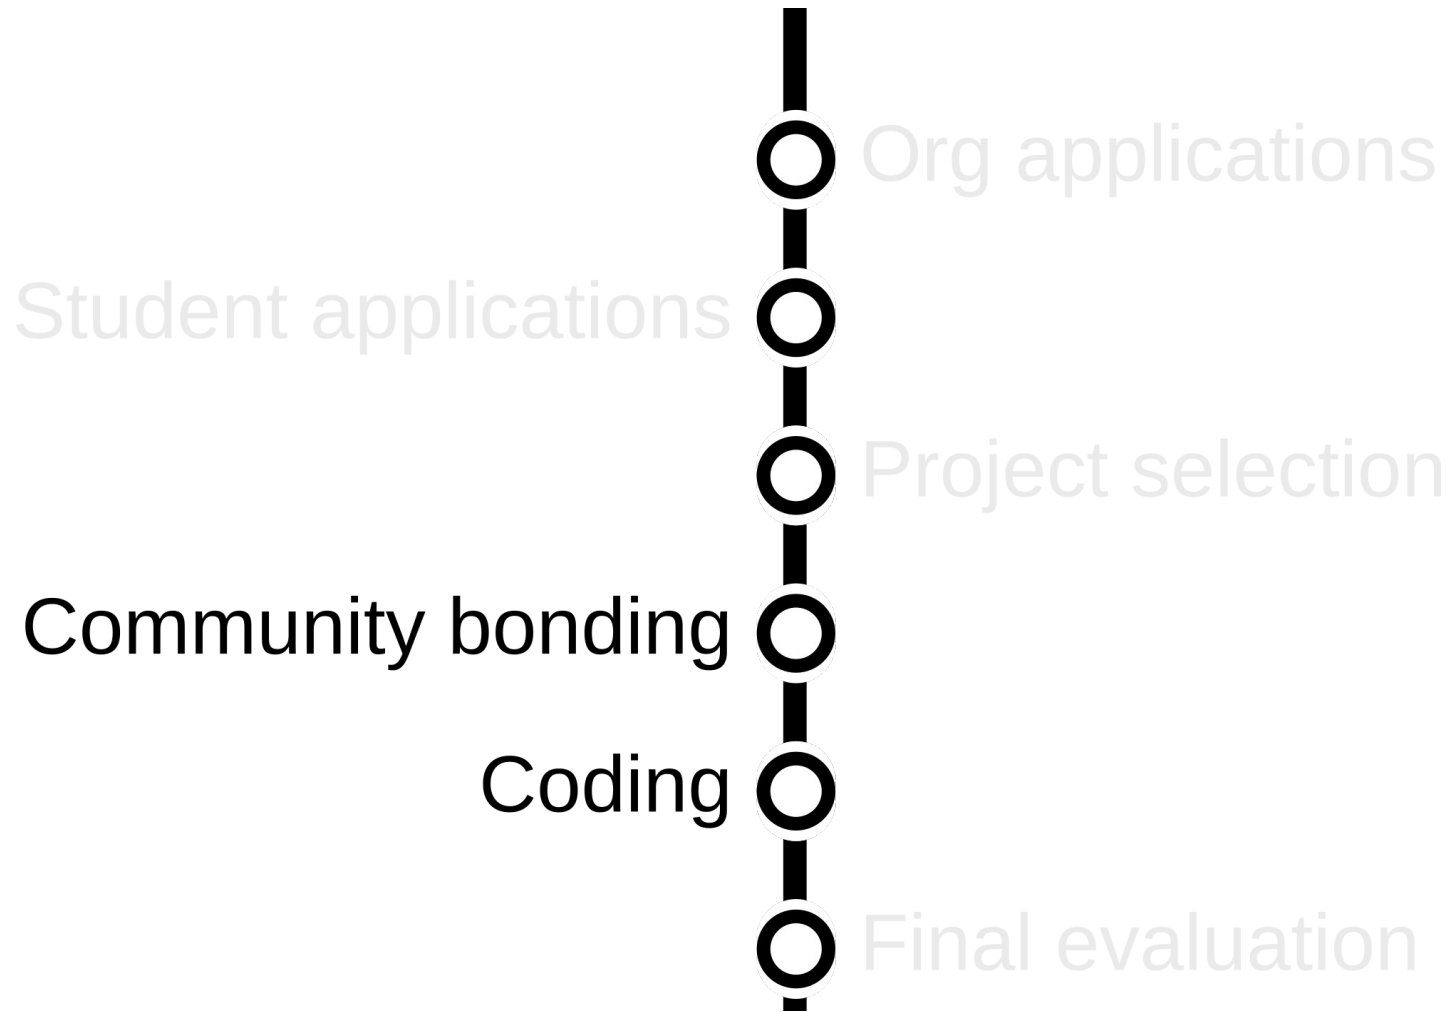

Step 1: Move proposals to ignore list

Step 2: Independently rate proposals

Step 3: Meet for conference call

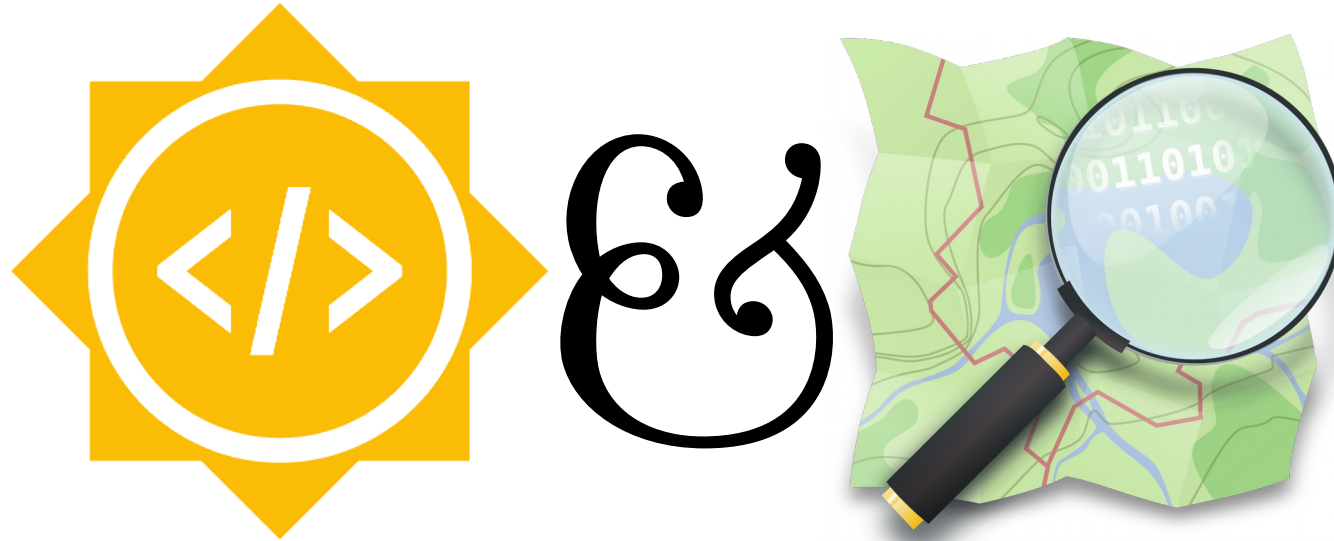

- Output: Ordered list of proposals, “min” / “max” / “no”
- Other selection factors:
 - Mentor vetos, lack of mentors
 - Conflicting projects
 - Mentor workload

Timeline

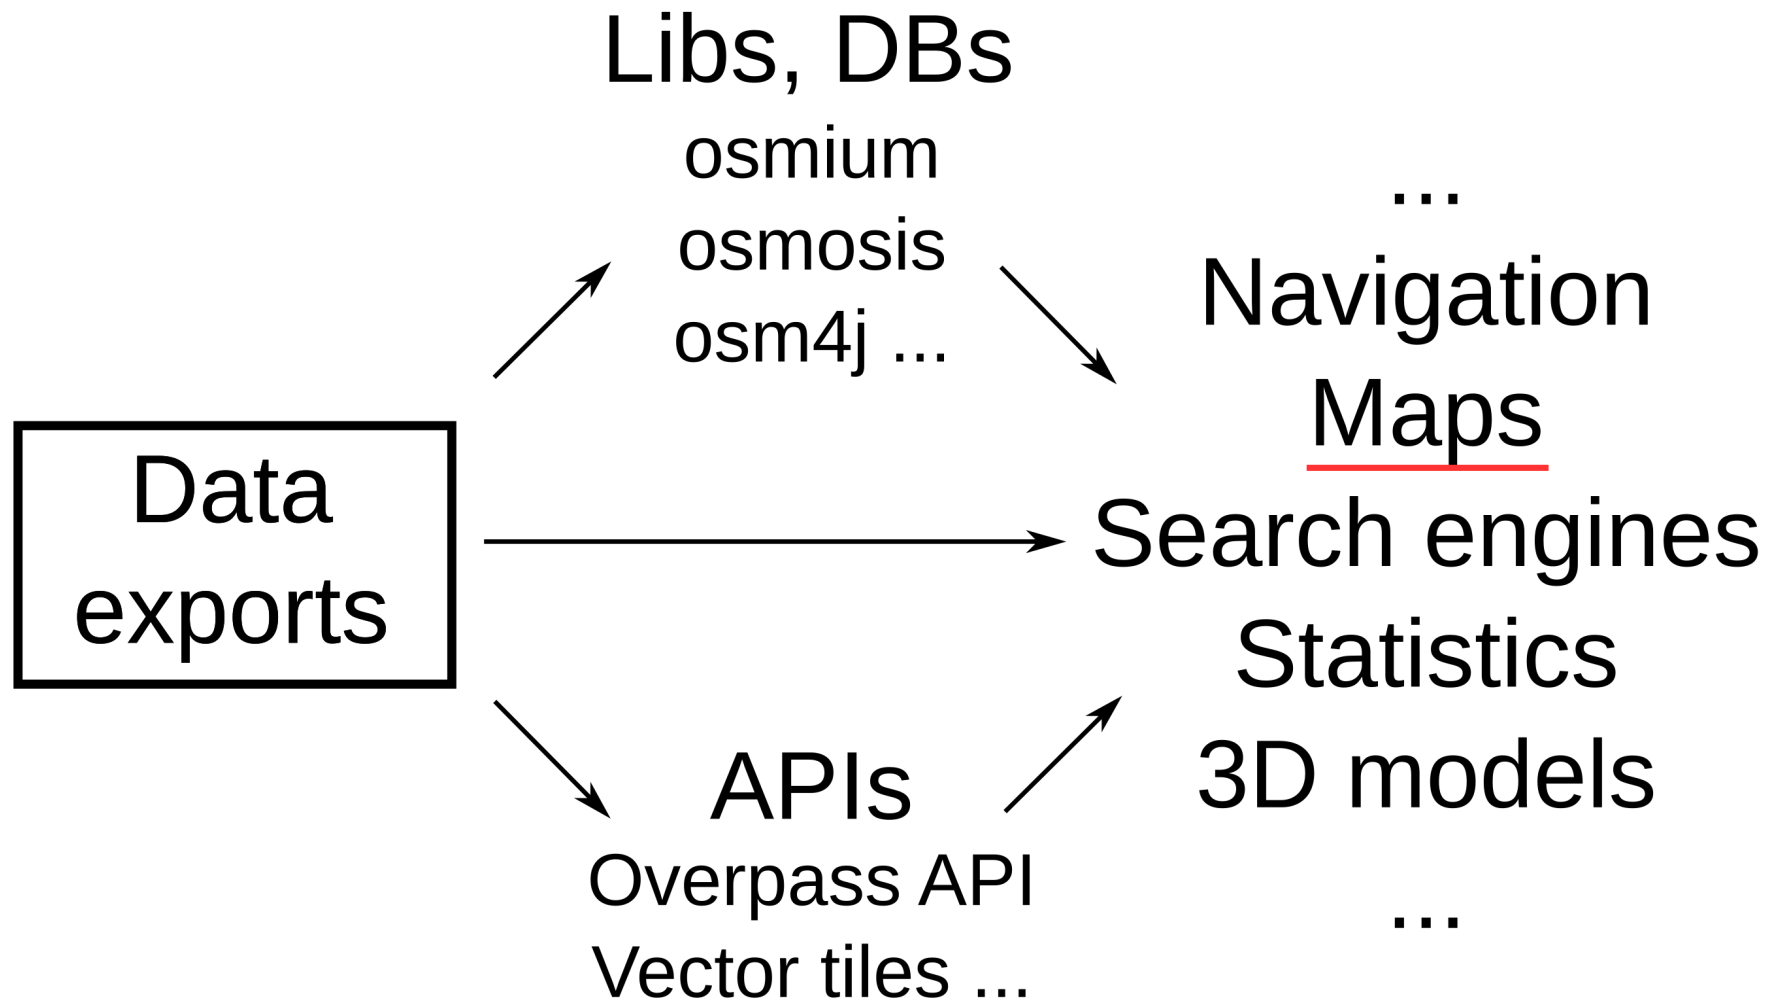

GSoC participation

- Community bonding (2 weeks)
- Coding (3 months)
- Communicate!
 - weekly check-ins with mentor
 - keep in touch with the larger community
(at OSM: ~biweekly blog posts or similar)
 - contact admins about problems with mentors

Generating raster map tiles

- Input: DB with map data
(optimized for rendering)
- Output: PNG images
typically 256x256 pixels
- Default style on osm.org:
“openstreetmap-carto”
- Software: Mapnik
- Style written as CartoCSS

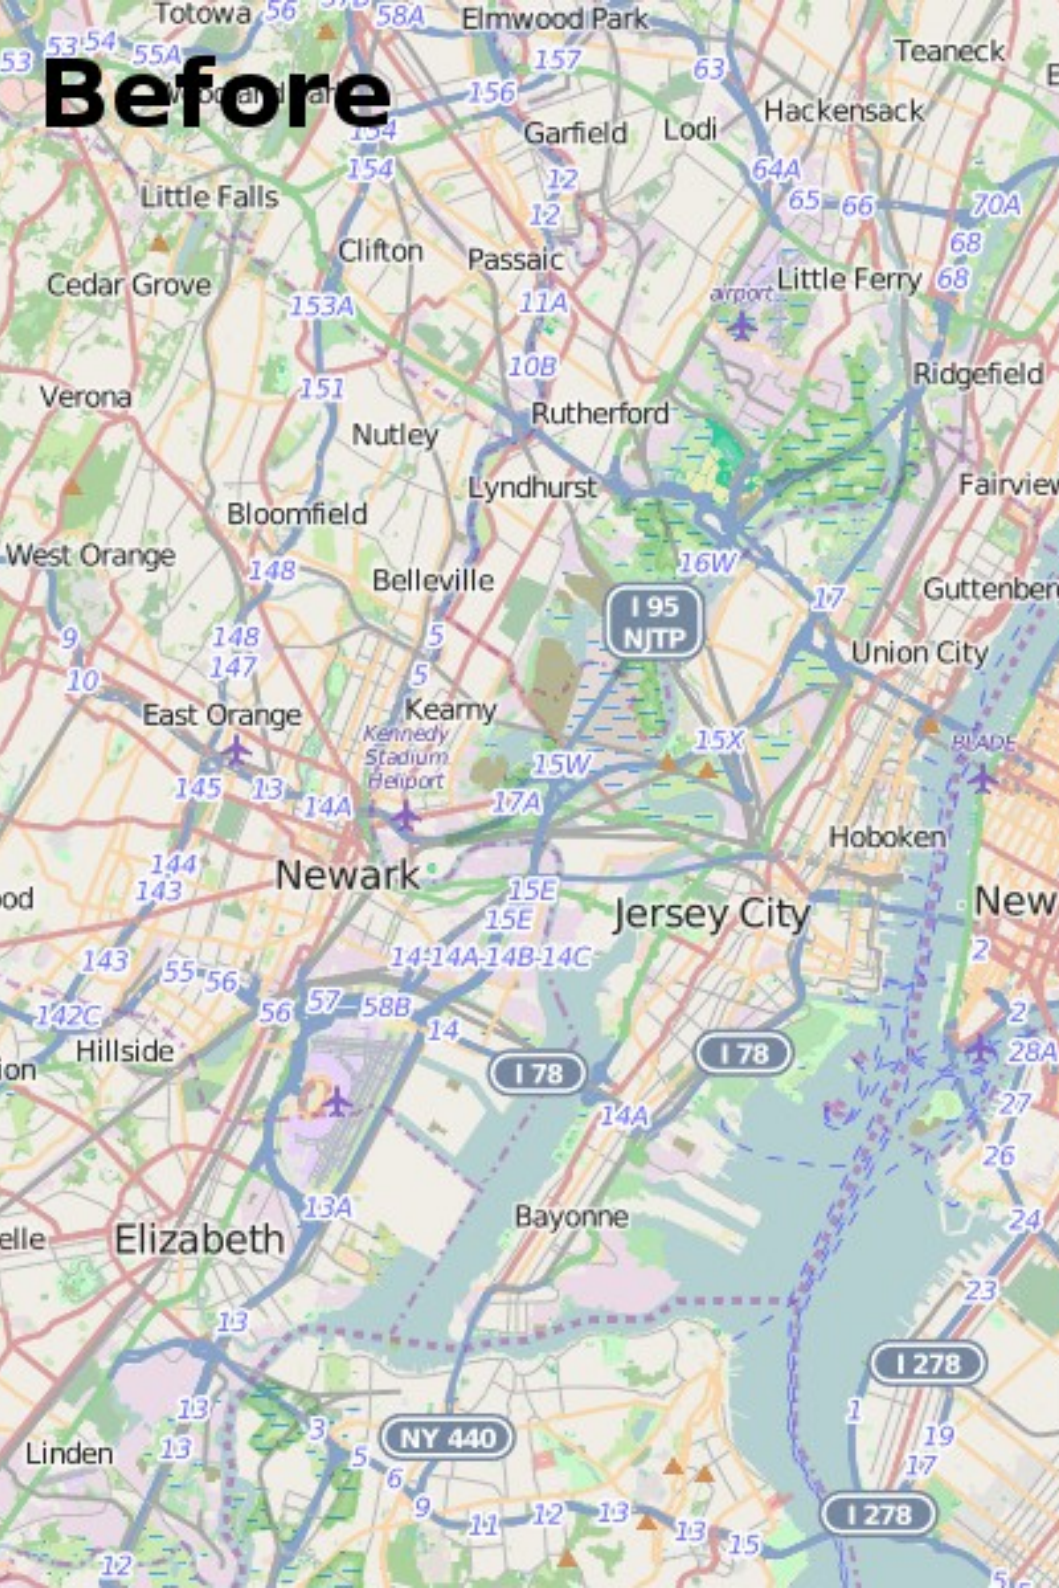

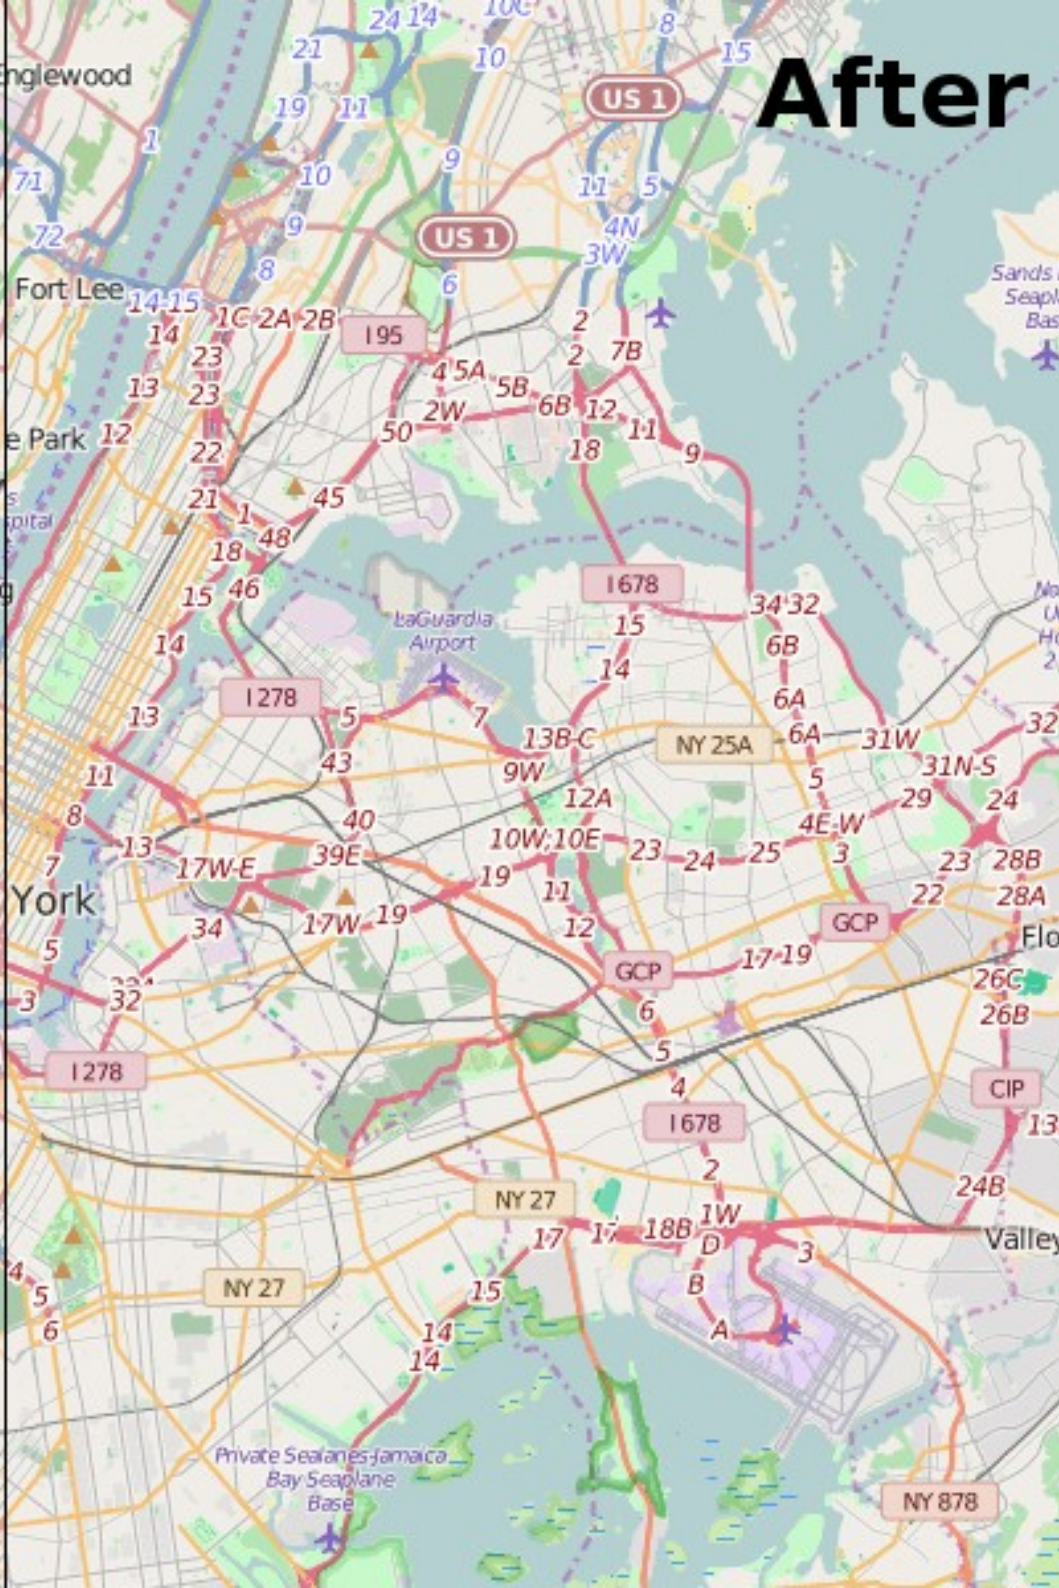

Improvements to openstreetmap-carto

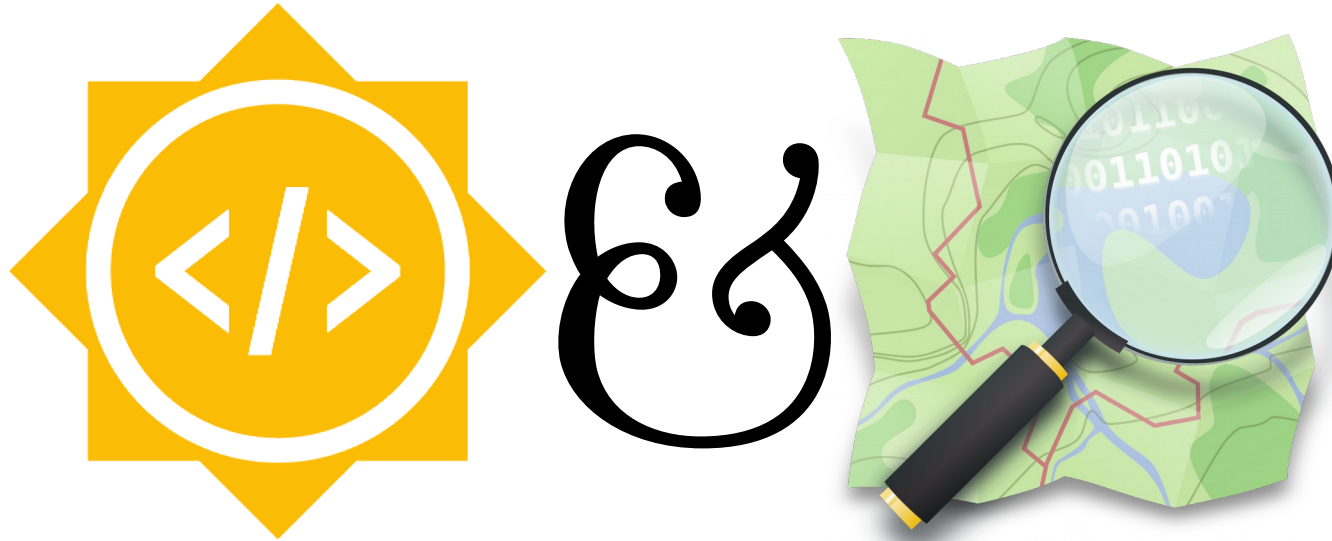

Mateusz Konieczny, 2016

Before

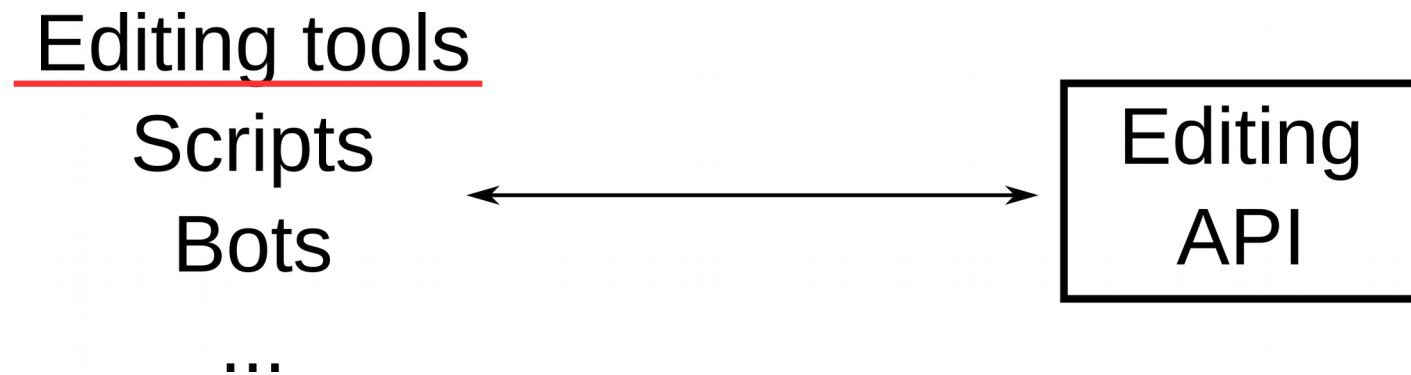

After

OSM examples: Editing tools

Example: Editing tools

OSM editors

iD – “edit” on osm.org
ease of use, largest no. of users
Web, JavaScript

JOSM
powerful, most data contributed
Desktop, Java (with plugin API)

OSM editors (mobile)

Street Complete

cannot edit everything, “quests”
Android, Kotlin

Vespucci

feature-rich, oldest Android editor
Android, Java

የ

Adding Notes to iD Editor
Thomas Hervey, 2018

Notes on osm.org

Resolved note #689

Description

There's a big roundabout at this junction. The map is showing it as a crossroads

Created by [anonymous](#) about 2 years ago

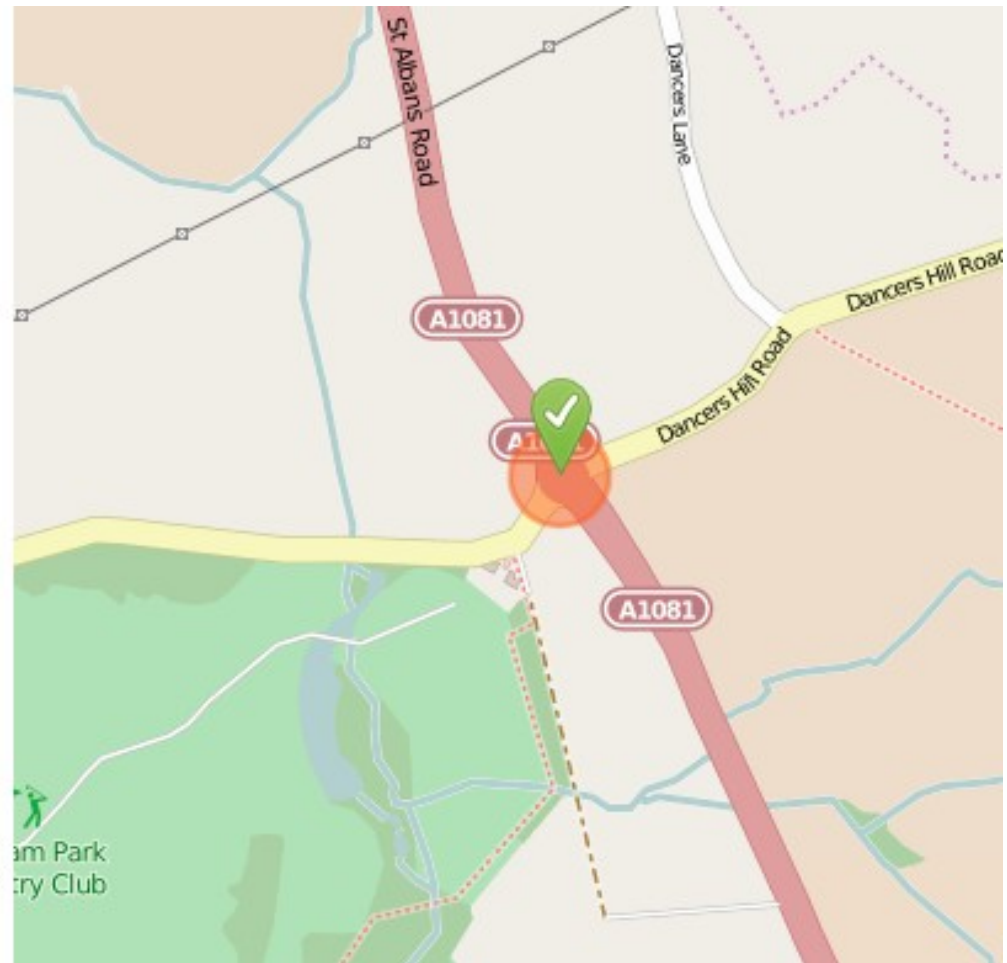

Resolved by [Harry Wood](#) about 2 years ago

This note includes comments from anonymous users which should be independently verified.

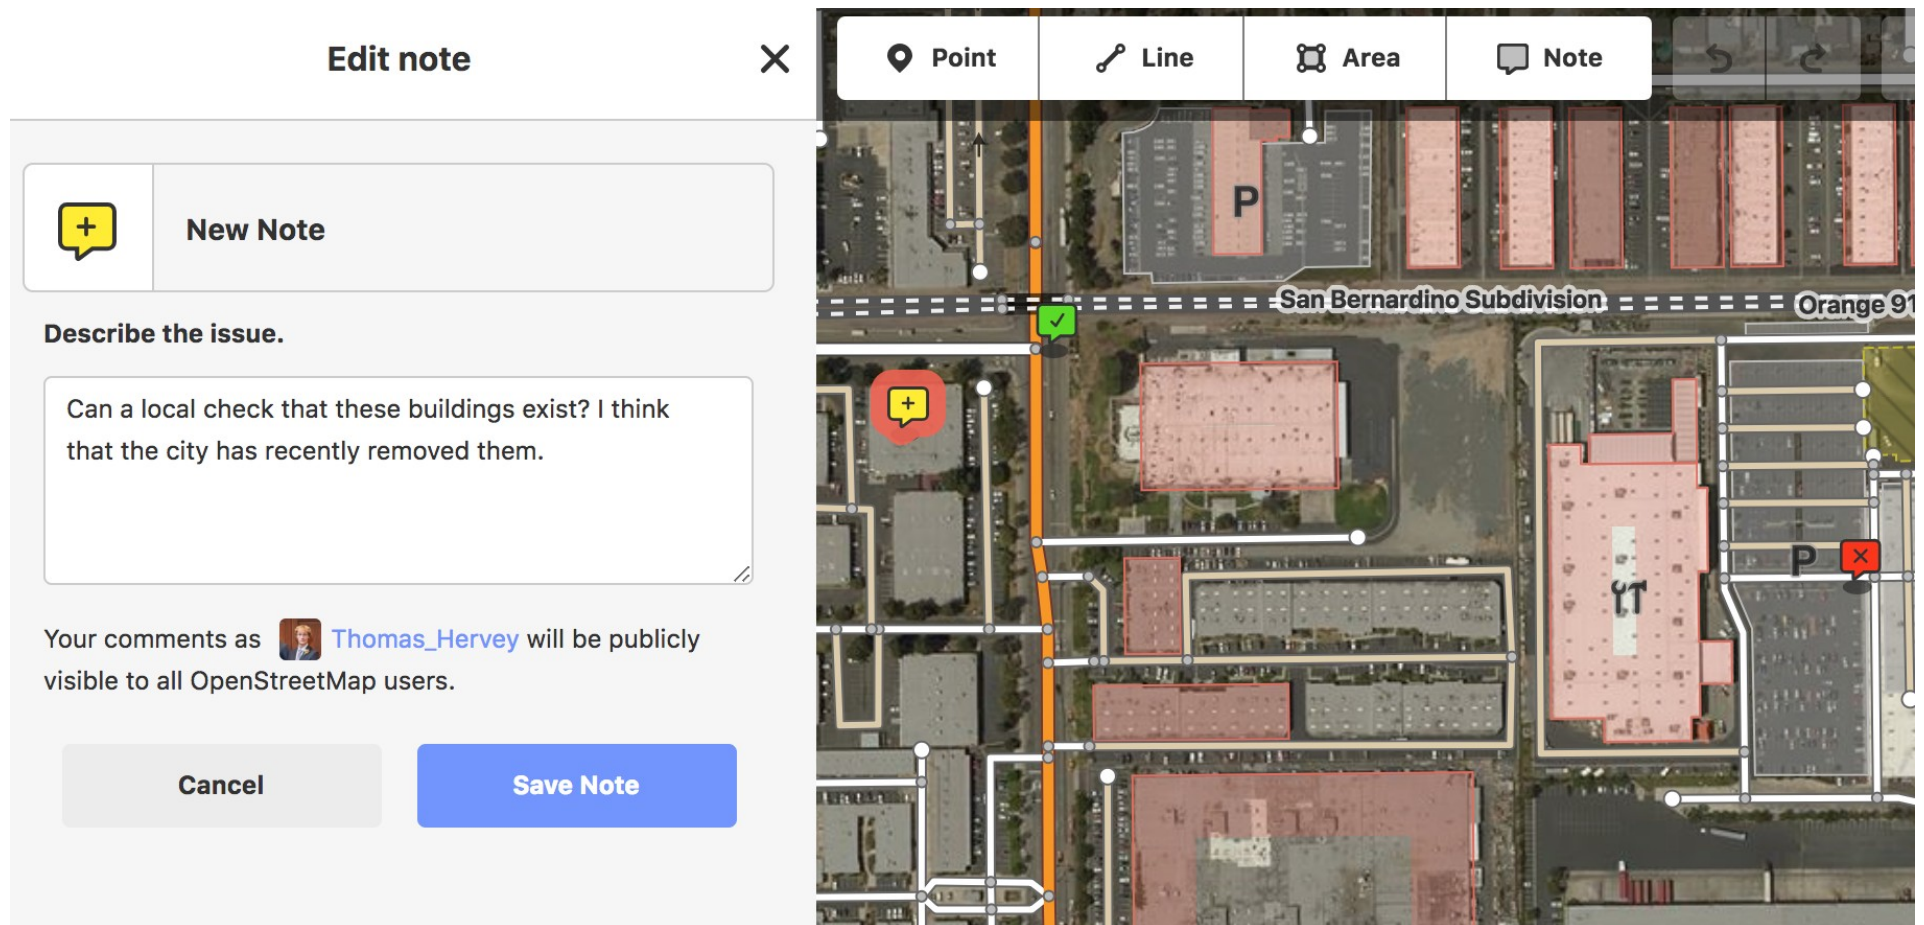

Resolved by [Harry Wood](#) about 2 years ago

Thanks for reporting this. We had this mapped as a "mini-roundabout" but you're right, it's a big roundabout. I have fixed it.

3D Traffic Sign Rendering in OSM2World
Iason Manoloudis, 2016

OSM2World: Traffic signs

- catalogs per country
user-defined (no coding)
- national defaults
- multiple signs
- new texturing logic
 - textures from SVG
 - textures from text
- infer signs from attributes
(e.g. maximum speed)

Timeline

Evaluations

- Once a month: Evaluation
 - Mentors decide if students pass or fail
 - Failure ends GSoC participation
 - Students evaluate mentors as well
- Stipends are paid in three parts, one after each successful evaluation:
 - First Evaluation: 30%
 - Second Evaluation: 30%
 - Final Evaluation: 40%

After GSoC

- Code preferably merged during GSoC
avoid “almost finished” code
- Your name + project remains public

- Hopefully, you'll stay with the project!
- Apply again next year?

Organizations Announced February 20

Student Application March 16 - 31
